Conversion among mass density values along with mass concentration values (mass divided by volume). Ounces and pounds are in the avoirdupois system, a standard everyday system in the United States where 1 ounce and 1/16 pound How to convert conversion density units are performed using a conversion rate. Knowing the conversion rate, conversion between units can be a simple multiplication problem: S and C e, where S is our starting value, C is our conversion rate, and E is our ultimate converted result. To simply convert from any unit to a kg/m<sup>3</sup>, for example, from 50 pounds/foot<sup>3</sup>, just multiply by the value in the right column in the table below. 50 lb/foot<sup>3</sup> - 16.018463 (kg/m<sup>3</sup>) / (pound/foot<sup>3</sup>) - 800.92315 kg/m<sup>3</sup> To convert from kg/m<sup>3</sup> to units in the left column are divided into value in the right column or, multiplied by reciprocal, 1/x. 800.92315 kg/m<sup>3</sup> / 16.018463 (kg/m<sup>3</sup>) / (pound/foot<sup>3</sup>) - 50 lb/foot<sup>3</sup> Conversion among any units in the left column, say, from A to B, you can multiply by A to convert A into kg/m<sup>3</sup>, and then divide into a factor that B converts from kg/m<sup>3</sup>. Or you can find the only factor you need by dividing the A factor into B. For example, to convert from lb/ft<sup>3</sup> to g/mL can be multiplied by 16.018463 and then divided by 1000. Or multiply by 16.018463/1000 and 0.016018463. So to convert directly from pound/foot<sup>3</sup> g/ml you multiply by 0.016018463. To understand how to also convert units to follow this example. Let's say you want to convert from pound/foot<sup>3</sup> pound/in<sup>3</sup>. You want to convert your foot by inches. Since you can multiply anything by 1 and still save the original value, but in different units, set it so that ft<sup>3</sup> will cancel leaving you with in<sup>3</sup>. Since then: 1 foot 12 in, 1 foot/12 at No.1 We can write a conversion like: 1 lb/foot<sup>3</sup> - pound/foot<sup>3</sup> (1 ft/12 c)<sup>3</sup> 5.787037e-04 lb/in<sup>3</sup> And now we have our factor to convert from pound/ft<sup>3</sup> to pound/in<sup>3</sup> from 1 - 5.787037e-04 - 5.787037e-04. Knowing that 1 pound/foot<sup>3</sup> and 5.787037e-04 pounds/in<sup>3</sup> now we can find conversion conversion to convert back. By dividing both sides of the equation into 5.787037e-04 we get 1728 pounds/foot<sup>3</sup> and 1 pound/in<sup>3</sup>. Thus, the conversion factor to multiply by convert from pound/in<sup>3</sup> to pound/foot<sup>3</sup> is 1728.
